

Fixing problems with Internet Explorer

We've been getting reports where users cannot type into a text field in websites, and other anomalies. These quick steps should fix many of those problems. This only works in the Internet Explorer browser.

- Go to the site where you're having the problem. Keep the website open.
- Click the little gear icon in the top-right corner of Internet Explorer and then click Compatibility View Settings

- The website you're having the problem with should be listed under "Add this website". Click the Add button. The site should show up in the list. Click Close. DONE!
